Diffusers documentation

Diffusers

and get access to the augmented documentation experience

to get started

Diffusers is a library of state-of-the-art pre-trained models for generating videos, images, and audio.

The library revolves around the DiffusionPipeline

easy inference with only a few lines of code

flexibility to mix-and-match pipeline components

loading and using adapters like LoRA

Diffusers also comes with optimizations - such as memory optimizations - even the largest models are accessible on memory-constrained devices. issue, Diffusers supports torch.compile to boost performance.

Get started right away with a Diffusers model on Hugging Face

Learn

If you're a beginner, we recommend starting with the [Diffusers tutorial](#). You'll learn the theory behind diffusion models, how to use them to generate images, fine-tune your own models, and more.
