and get access to the augmented documentation exp

to get started

timm is a library containing SOTA computer vision models, optimizers, schedulers, data-loaders, augmentations, and training utilities.

timm

It comes packaged with >700 pretrained models, and a CLI to make it easy to use.

Read the quick start guide to get up and running with timm. It covers how to load, discover, and use pretrained models including ResNeXt, ViT, and more.

timm

Learn the basics and become familiar with timm. Suitable for newcomers to the library or first time!

Technical descriptions of how timm classes and methods work under the hood.
